PROFESSIONAL SUMMARY

Cybersecurity analyst focused on offensive security, penetration testing and web and mobile application security. Hands-on experience in reconnaissance (OSINT), exploitation and post-exploitation in controlled environments, documenting findings and remediation measures. Trained in applied AI with a full-stack development background.

CYBERSECURITY PROJECTS

Security audit of an organization (OSINT + exploitation)

Nmap · Nikto · Burp Suite · theHarvester · Amass · Shodan · Kali Linux

- **Phase I (passive black box):** OSINT (Google Dorks, theHarvester, Amass, Shodan) and DNS analysis (nslookup, whois, dig), with no active testing against the real organization.
- **Phase II (vulnerable VM):** enumeration with Nikto and Burp Suite; exploited anonymous FTP, credentials exposed client-side, sensitive paths (robots.txt) and command injection; escalated to root through a sudo misconfiguration and captured 9 flags.

Web penetration test of WackoPicko

OWASP ZAP · manual testing · PHP/MySQL

- Crawl and Active Scan with ZAP (16 alerts: 1 high, 4 medium, 7 low, 4 informational) and manual exploitation of 12 vulnerabilities: XSS (reflected, stored, multi-step), SQL Injection, LFI, directory traversal, weak credentials, predictable session ID, IDOR and a business logic flaw.
- Report with prevention measures and corrected code (PDO prepared statements, *htmlspecialchars*, allowlists). Confirmed that logic and session flaws are missed by the automated scanner.

Security audit of an Android application (InsecureApp)

apktool · jadx · adb · Genymotion · Burp Suite

- Static analysis (excessive permissions, unprotected exported components, AES with hardcoded key and static IV, ContentProvider without access control) and dynamic analysis (cleartext traffic without HTTPS, debuggable app, /devlogin backdoor allowing password-less authentication, root and emulator detection bypass).

EXPERIENCE

devlab:studio **Mar 2025 – Jun 2025**

Intern · Madrid (hybrid)

- Full backend and database development for real clients' websites: elalquilador.com (professional machinery and tool rental) and obrasimpala.com (construction and renovation project portfolio).

DEVELOPMENT PROJECTS

Nexora: clinic management SaaS (in development)

React 19 · TypeScript · Tailwind CSS · Express · Prisma · PostgreSQL · JWT/OAuth · Stripe · Docker · GitHub Actions

- Platform for clinics and healthcare professionals covering scheduling, medical records, billing and AI tools, with JWT and Google OAuth authentication. Solo project: github.com/ikergarciaf/Nexora.

PalmoSL: AI business automation for Palmo Suministro Integral

Python · FastAPI · React · TypeScript · Google Sheets

- System that automates email handling (AI classification and replies) and forecasts stock with purchase alerts. Built with AI tools as part of the AI specialization course: github.com/ikergarciaf/PalmoSL.

EDUCATION

Master's in Cybersecurity **Nov 2025 – Nov 2026 (in progress)**

IMF Business School, in collaboration with Deloitte and Universidad Católica de Ávila (UCAV)

Specialization Course in Artificial Intelligence **2026**

Fedeto Business School

Higher Vocational Diploma in Network Systems Administration (ASIR) **Sep 2023 – Jun 2025**

IES Ribera del Tajo

TECHNICAL SKILLS

Offensive security: Kali Linux, Nmap, Burp Suite, Metasploit, Nikto, OWASP ZAP, penetration testing, vulnerability analysis, web security, OSINT, Android app analysis (apktool, jadx, adb)
Networks and systems: Wireshark, traffic analysis, network security, DNS, DHCP, HTTP, FTP, SMTP, WLAN, Linux, Windows Server, Docker, Ansible
Scripting and AI: Bash, PowerShell, Python, Artificial Intelligence, Machine Learning, automation, security of AI-based applications
Development: React, TypeScript, Next.js, Python (FastAPI), Node.js (Express), PostgreSQL

LANGUAGES

Spanish: native | **English:** B2
